

# **TASK: Steampowered.com Multi-Version CMS Backend**

**Objective: Create a full-featured CMS backend for multiple versions of steampowered.com (2002-2009) with template engine, MySQL database, and admin interface**

## **STEPS:**

- [ ] STEP 1: Research and extract historical steampowered.com versions from archive.org (2002-2009) → Research STEP
- [ ] STEP 2: Design and implement custom template engine with theme support → System STEP
- [ ] STEP 3: Build MySQL database schema for news, FAQ, navigation, and settings → System STEP
- [ ] STEP 4: Create CMS backend with PHP/Node.js API for content management → System STEP
- [ ] STEP 5: Convert historical HTML into dynamic themes using template engine → System STEP
- [ ] STEP 6: Develop admin interface for news, FAQ, navigation, and logo management → System STEP
- [ ] STEP 7: Implement historical news data seeding for each era → System STEP
- [ ] STEP 8: Test complete system and deploy → System STEP

# **Deliverable: Complete working CMS system with:**

- Custom template engine
- MySQL database with historical data
- Admin interface for content management
- 8 different steampowered.com era themes (2002-2009)
- Logo upload functionality
- Navigation management
- News and FAQ management
