

STEAMWORKS™

2 0 0 9

steamgames.com/steamworks

Used by 20 million gamers.
Available to you for free.

You're making a game for the largest and greatest gaming platform on Earth – the PC.

Your game can use the same platform that supports over 500 PC game titles on Steam. Steamworks gives you access to a connected community of 20 million gamers and a robust world-wide network, while providing a rich set of proven features that let you develop, publish, and protect your game.

Steamworks is entirely free. There are no licensing fees and there's no charge for bandwidth, retail copies, or OEM distribution.

With Steamworks, you avoid the overhead and delay of certification requirements. Distribute your game on your terms, updating it as quickly and frequently as you see fit.

Steamworks Games

Steamworks is a road-tested technology, shipping in tens of millions of retail and online units throughout the world. Steamworks partners have published some of the most recent top-tier, award-winning PC titles. Steamworks adds value and offsets costs to these titles through a combination of Game Services and Publisher Services. Many of these partners have added Steamworks features after the initial launch of their game, increasing sales while their customers enjoy increasing value.

Steam Anti-Piracy

Steamworks’ anti-piracy suite combines three approaches to anti-piracy: (1) **Custom Executable Generation**, (2) **Retail Encryption**, and (3) **Valuable Platform-Dependant Features**. These work together to provide a seamless end-user experience, protecting your game and giving real value to customers.

1. Custom Executable Generation

Custom Executable Generation creates a unique build of your game for each user, making it difficult for any one user to share the game with any other user. Each individual copy of a CEG-protected game is only playable by the Steam account authorized to access it. CEG is transparent, and does not impose limits on users. It lets users access their content from any hardware, and allows

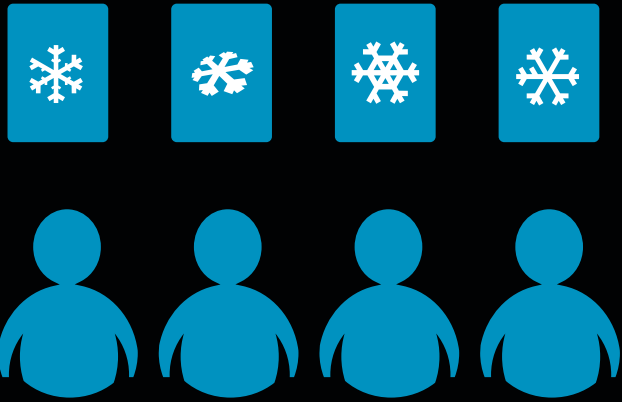

unlimited hardware configuration changes without the content becoming unplayable. In fact, no changes are made to a user’s computer for CEG to work. Instead, CEG works in tandem with Steam authentication, enabling content access based on user accounts, not arbitrary hardware-based “rights-management” restrictions.

Digital Rights Management (DRM)

Your game isn’t yours, it’s your machine’s.

Steamworks CEG

Your game is yours (and no one else’s).

2. Retail Encryption

Protect your day-one release by shipping encrypted media to stores world-wide. No need to worry that your game will leak from a replicator or stock room – your game stays encrypted until the moment *you* decide to release it.

Encryption technology also allows you to preload your game to users on Steam. Download encrypted data weeks in advance so that players have access to your game the moment your it’s released, increasing player numbers and satisfaction during the critical first days.

3. Valuable Platform-Dependant Features

Customers won’t want to pirate a game that’s connected to 20 million gamers and a feature-rich platform. Features like Steam Achievements, Anti-Cheat, Auto-Updating, and Steam Cloud simply don’t exist outside of Steam.

Furthermore, constantly updating your game with upgrades and content leaves the pirates in the dust – they are relegated to a featureless game with no community of players.

Steam Cloud

Store data in Steam Cloud for your users. The Steam Cloud API allows your game to write and retrieve files for each user. Use it for personalized settings like keyboard, mouse, and gamepad configurations, multiplayer sprays, or even saved games. Steam Cloud is a natural extension of the portability that Steam affords gamers. Shipped with Left 4 Dead, Steam Cloud is now a proven resource and is becoming an integral part of the Steam experience.

Matchmaking / Lobbies

Steamworks’ multiplayer back-end is powered by robust matchmaking and lobby technology. The same technology that drives the quick and accurate match-ups in Left 4 Dead can be used in your game.

Works with both peer-to-peer and server-based games.

Steamworks’ built-in voice functionality enables players to work quickly to strategize their next misson.

Multiplayer matchmaking - Players connect and match to other players quickly and accurately in Left 4 Dead.

In-Game DLC

Sell additional content from within your game to the customers who want it most. Steamworks provides true in-game DLC, allowing customers to select, buy, and use DLC – all without leaving the game. Additionally, using Steamworks’ DLC does not close off your other channels. You are still free to sell the content at retail, either with other online sites or through the Steam store.

DLC - Games like The Maw feature downloadable content, enabling players to access to additional game content.

DOWNLOADABLE CONTENT FOR THIS GAME	
The Maw: Brute Force	\$1.25
The Maw: River Redirect	\$1.25
Add all DLC to Cart
