

# STEAMWORKS™

---

[steamgames.com/steamworks](http://steamgames.com/steamworks)

Used by 15 million gamers.  
Now available to you for free.

STEAMWORKS makes your PC games and your business better by providing proven game services, publishing services, and development tools.

Now your game can use the same platform that supports over 250 PC game titles currently on Steam.

With no licensing fees and no charge for bandwidth, keep your customers up-to-date and together with a unified system.

There is no requirement that you sell your game on the Steam digital store.

Plus, Steamworks does not have a certification requirement—your game and its future are yours to control.

**Connect with your customers.**

## Game services

### Persistent identity framework

Achievements, leaderboards, profiles, and avatars make your game come alive, building your community and providing a strong incentive to play more and recruit others.

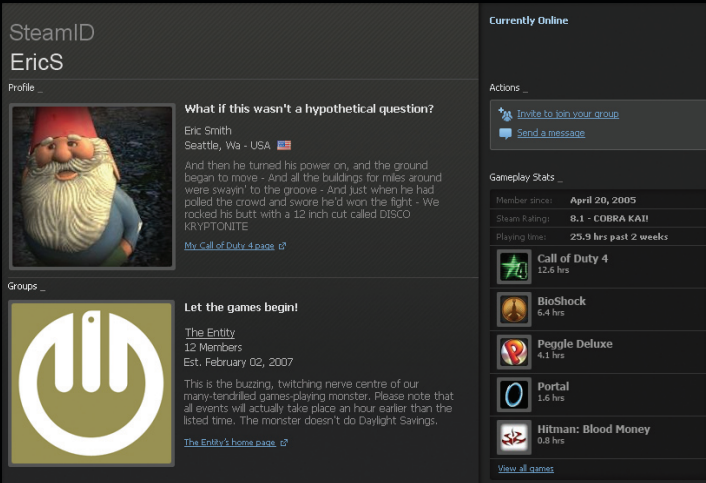

15 million users on Steam.

### Multiplayer matchmaking

The same robust back-end that brings players together for Counter-Strike: Source, Team Fortress 2, and (coming soon) Left 4 Dead. You can customize these features to create specific matchmaking and lobby functions.

### Voice chat

With built-in voice chat, players can talk to each other both inside and outside the game.

Community user profile pages - Your game is exposed by gamers to gamers throughout The Steam Community. Plus, you can create your own community pages to communicate with your customers.

### The Steam Community

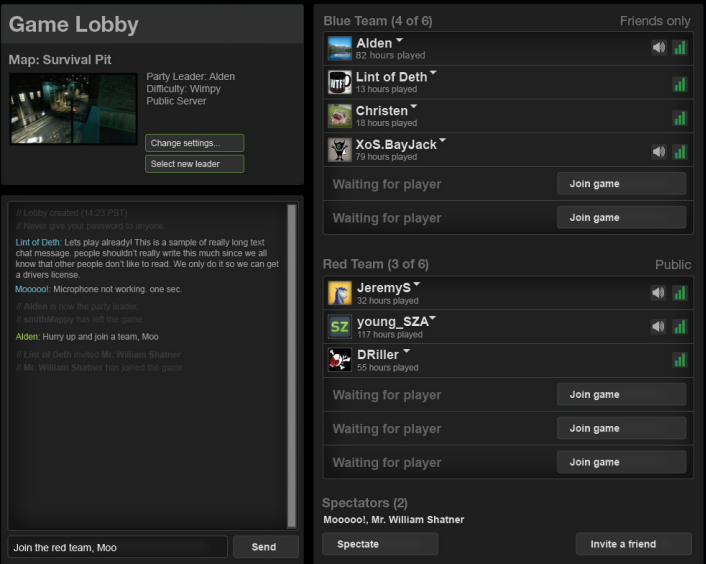

Your game becomes the talk of the town as part of Steam's large and connected Steam Community. Friends will see friends playing your game and will be able to organize matches, compare achievements, and talk about the next match, sequels, favorite parts, or the best villain.

### Anti-cheat

With true cheat detection, keep cheaters from ruining it for the rest of us. Extend the life and sales of your game by making sure that the game plays as you intended it to when you shipped.

### Access from any PC

Your customers can sign in and use their game from any PC. Access to their games is based on a customer account, not tied to a computer. Plus, with built-in *offline* mode your customers can play on laptops when traveling or anywhere else.

Game lobby system - Users can set up matches quickly and efficiently by using Steamworks matchmaking services.

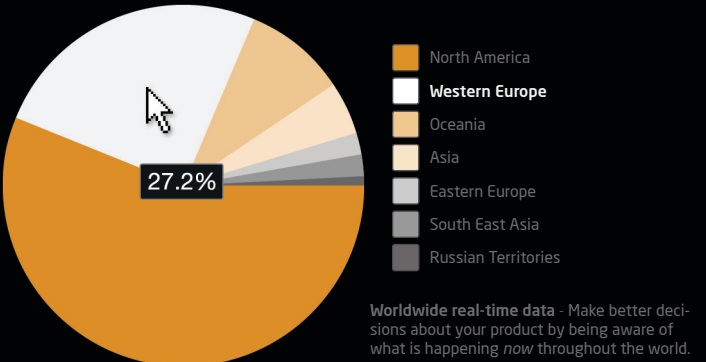

## Publishing services

### Auto-updating

Be confident that all of your customers are running the most current version of your game. Update and expand your game as you see fit. Your community stays current, and your support burden will be significantly reduced. With no certification process, you're in control. Update as much as you want, with as much as you want –there is no charge for bandwidth.

### Real-time sales data

Log on to your personal sales and data tracking site and see your product's statistics up-to-the-minute. Don't wait for weeks to find out where and how your game is selling. Real-time, worldwide activation and use reports give you the detail you need to make informed decisions about marketing and retail conditions when they need to be made.

Worldwide real-time data - Make better decisions about your product by being aware of what is happening *now* throughout the world.

### Free Weekends and Guest Passes

Hold Free Weekends (or any length play period) to entice customers and promote your game. Then securely and efficiently turn the game back off at the end of the period. Also available is guest pass technology that allows you to promote your game through your community. Let friends give free, limited time passes to their friends. Proven tech that has been used with our games and third parties.

### Encrypted retail media

Protect your day one release by shipping encrypted media to stores worldwide. No worry that your game will leak early from the manufacturing path, because your game stays encrypted until the moment you decide to release it.

### Anti-piracy

End-to-end anti-piracy solution. Steamworks provides both a wrapper to protect your application and online authentication. Your game is associated with a single customer account, which is used for multiplayer authentication (no more "shared" key lists on the Internet). Plus, the ongoing benefits of customers being current and connected on Steam make piracy an unattractive option.

No charge for bandwidth.

### Territory control

Open up new markets. Games can be set to authenticate only in specific regions, allowing you to go day-and-date worldwide without the worry of grey marketing of products intended for specific territories.

### Key-based authentication

Easy, known, and proven path for customers to authenticate their game. Keys are the backbone for inventory control and sales data. Keys can be customized for region, content, language, and SKU.

Development tools

Beta-testing

Run secure public betas of your game. Hold public betas and choose from one participant to thousands, if you like. The timing and scope of the beta is up to you.

Build better products.

Bug reporting

Track most frequent crashes in real time and then triage based on number of unique users. Auto-collection of minidumps and minidump parsing tools to make your job easier. Find and address bugs even before customers contact support.

Game stats and achievements - Create a robust community by having game specific stats and achievements accessible to your customers and their friends.

Rapid and secure build distribution

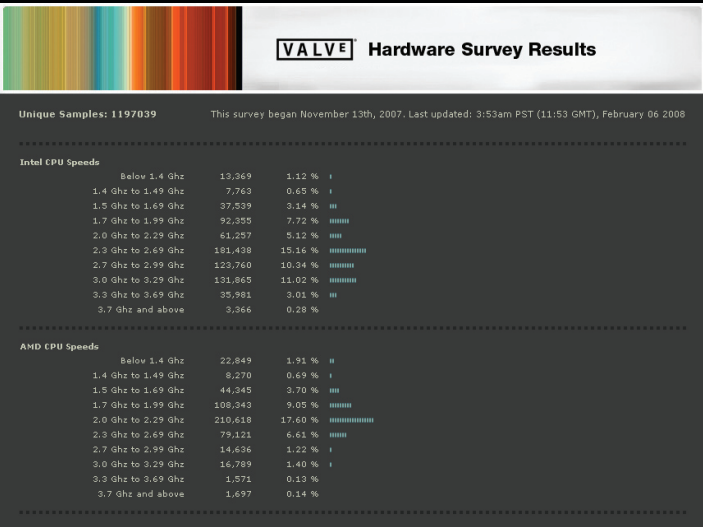

The same tool that allows us to securely build and share Left 4 Dead between our offices in Seattle and Orange County can be used for your product as well. No more syncing to build trees to playtest. Let your own internal version of Steam help you run more frequent playtests at the click of a button.

Know your target audience

Using the results of the Steam Hardware Survey to look at your game in particular, you can better target your development and support of games.

Installer

Reduce your support costs with Steamworks updatable, proven, and intelligent installer. Your installer can be auto-updated even after delivering a gold master, ensuring that your customers have the best experience from the first time they play your game.

Hardware data - Support your audience better by knowing more about the latest hardware they are using to play your game.
